Quantitative Developer

SUMMARY

Business Analyst with around 5 years of experience in data analytics and reporting for banking and healthcare. Delivered enterprise Power BI dashboards covering 35+ operational KPIs across six business units, cutting ad hoc reporting requests and boosting leadership visibility. Conducted SQL driven analyses that raised SLA adherence by 18% and led requirements elicitation workshops that reduced rework by 30%.

SKILLS

Business Analysis & Strategy: Requirements Elicitation, BRD/FRD Authoring, User Stories, Gap Analysis, Process Mapping, Stakeholder Management, KPI Frameworks, Dashboard Design, Process Improvements

Business Intelligence & Visualization: Power BI, Tableau, Excel (Advanced)

Data Management & Querying: SQL, Data Dictionaries, Data Validation, ETL, Data Refresh Validation, Data Lineage Documentation

Project Management & SDLC: Agile/Scrum, UAT, Defect Management, JIRA, Confluence, Sprint Planning

Compliance & Governance: HIPAA, SOX, Audit Readiness, Regulatory Reporting, SOC Controls, PHI Access Controls

Domain Expertise: Banking Operations, Financial Reporting, Healthcare Analytics, Claims Processing, Utilization Management, Member Eligibility, Provider Performance

Programming & Development: Python, C++, Java, Git, Cloud computing platforms

Data Science & Machine Learning: NumPy, pandas, Machine learning techniques, Linear algebra, Statistics

WORK EXPERIENCE

PNC Bank, USA USA

Business Analyst Aug 2024 - Present

• Architected enterprise Power BI dashboards for 35+ KPIs across 6 units, preprocessing source data with Python pandas and NumPy, storing results in Azure cloud, and version controlling scripts via Git, delivering consolidated visibility and cutting ad hoc reporting requests by 30%.

• Led 20+ cross functional requirement workshops (communication, teamwork) with operations, finance, and compliance, translating needs into functional specs and applying statistical modeling (linear algebra, statistics) to define KPI logic, slashing clarification cycles 30%.

• Converted complex stakeholder requirements into detailed functional documentation for 15+ dashboard initiatives, embedding Python based data transformation scripts and Git managed codebases, enabling analytics and engineering teams to ship solutions 25% faster.

• Analyzed millions of banking records using Python (pandas, NumPy) alongside SQL, applying machine learning clustering to surface trends and anomalies, boosting SLA adherence 18%.

• Partnered with data engineering and reporting teams (teamwork) to validate 100+ data mappings, automating transformation rule checks with Python scripts and Git CI pipelines, enhancing consistency and auditability enterprise wide.

• Executed month end and quarter end data validation using Python pandas validation frameworks and Git version control, improving reporting accuracy 35% and cutting downstream discrepancies.

• Owned end to end UAT for 12+ reporting solutions, scripting test case generation in Python, logging defects in JIRA, and coordinating cross team resolution, ensuring defect leakage under 5%.

• Conducted root cause analysis on 50+ variances using statistical regression and linear algebra models in Python, tracing issues to source systems and implementing corrective actions that cut recurring defects 28%.

• Defined and maintained KPI documentation, metric definitions, and data dictionaries for 60+ metrics, embedding data lineage metadata generated via Python scripts and storing artifacts in Git for audit readiness.

• Developed management reporting solutions that monitor productivity, turnaround time, and SLA adherence, leveraging Python driven calculations and cloud based data refresh (Azure), driving 20% efficiency gains.

• Evaluated and prioritized 40+ enhancement requests, applying agile prioritization and Python based performance profiling, improving dashboard usability and load times by 15%.

• Prepared executive summaries and visualizations using Python matplotlib and Power BI, delivering weekly/monthly performance snapshots that enhanced decision making across 6 departments.

• Collaborated with cross functional teams (teamwork, communication) to standardize reporting processes, codifying metric definitions in shared Python modules stored in Git, raising KPI consistency 30%.

• Supported month end and quarter end cycles for 10+ leadership and compliance reports, automating data aggregation with Python pipelines on AWS cloud, ensuring on time delivery and 99% data completeness.

• Monitored Power BI performance and data refresh cycles using Azure Monitor and Python health checks, proactively fixing issues and cutting refresh failures 25%.

CVS Health, India India

Business Intelligence Analyst Feb 2020 - Dec 2022

• Built and maintained 20+ Tableau and Power BI dashboards for healthcare KPIs, preprocessing claims data with Python pandas and NumPy, deploying visualizations on AWS cloud, and version controlling code in Git, boosting operational visibility 35%.

• Supported analytics initiatives across claims processing, eligibility, and utilization, applying machine learning classification models in Python to detect fraud patterns, handling millions of PHI records under HIPAA.

• Collaborated with operations and compliance stakeholders (communication, teamwork) to elicit requirements, translating payer workflows into 50+ KPI rules defined via statistical formulas in Python.

• Conducted 15+ structured requirement sessions, using agile user stories and Python driven data prototypes, prioritizing enhancements that cut rework 30%.

• Performed data validation and reconciliation for claims using Python validation libraries and pandas, identifying discrepancies per SOC controls and escalating for remediation.

• Supported ETL and data refresh validation with Python scripts and AWS Glue jobs, reducing refresh related issues 25%.

• Led UAT for 10+ dashboards, automating test case generation with Python and logging defects in JIRA, achieving 100% release sign off.

• Managed iterative enhancement cycles, converting 40+ user pain points into Python based feature requests, implementing changes without breaching PHI controls.

• Identified reporting inefficiencies and introduced Python automated reporting pipelines, cutting manual generation effort 30%.

• Documented KPI definitions, data sources, and Python based calculation logic for 60+ metrics, supporting SOX and SOC audits.

• Established data governance standards, embedding data lineage metadata generated via Python scripts and storing versioned artifacts in Git for 15+ dashboards.

• Provided production support, resolving 50+ user tickets by debugging Python data pipelines while maintaining HIPAA compliant access controls.

• Prepared weekly/monthly summary reports and visualizations using Python matplotlib and Power BI, enhancing leadership visibility into SLA and productivity trends.

• Acted as liaison between business users and technical teams across 4+ groups, facilitating communication and coordinating Python based solution delivery.

• Contributed to onboarding docs and knowledge bases, detailing Python workflow, KPI logic, and cloud refresh procedures, reducing ramp up time 25%.

EDUCATION

Saint Louis University St. Louis, MO

Masters in Information Systems, Business Analytics Specialization

Jawaharlal Nehru Technological University Hyderabad, India

Bachelors in Computer Science

CERTIFICATIONS

• Microsoft Certified: Power BI Data Analyst Associate

• Google Data Analytics Professional Certificate

• Business Analytics Foundations: Descriptive, Predictive & Prescriptive Analytics
